Education

Vardhaman College of Engineering, Hyderabad

Expected May 2027

Bachelor of Technology in Information Technology — CGPA: 9.34

VKDVS Raju Junior College, Aswaraopeta

March 2023

XII (Telangana State Board of Intermediate Education) — Marks: 989/1000

Z P S School, Dammapeta

May 2021

X (Board of Secondary Education) — CGPA: 10.0

Technical Skills

Programming Languages: C, Python, Java, SQL

Web Technologies: HTML, CSS, JavaScript, React.js, Node.js, Express.js, MERN Stack

Databases: MongoDB

Core Concepts: Data Structures and Algorithms, Object-Oriented Programming

Cloud: Cloud Computing (AWS Basics)

Experience

Cognifyz Technologies

Jan 2025

Front-End Development Intern

- Developed responsive and dynamic user interface components using HTML, CSS, and JavaScript to improve user experience.
- Applied CSS styling techniques to enhance visual design, layout consistency, and usability across web pages.
- Ensured cross-device compatibility by implementing responsive design for different screen sizes and devices.

Edunet Foundation

Nov 2025

Front-End Development Intern

- Built a personal portfolio website using HTML, CSS, JavaScript, and React, demonstrating modern frontend development practices.
- Implemented responsive design principles and utilized Git for version control and project management.
- Deployed the application and gained hands-on experience in real-world web development workflows.

Projects

Multi-Document AI Chatbot using Retrieval-Augmented Generation (RAG)

Mar 2026

Technologies: Python, LangChain, FAISS, Streamlit, Ollama

- Built an AI chatbot capable of answering queries from user-uploaded PDF, TXT, and CSV documents using a Retrieval-Augmented Generation (RAG) pipeline.
- Implemented semantic search using Sentence Transformers embeddings and FAISS vector database for efficient document retrieval.
- Integrated a local LLM (Llama3 via Ollama) to generate contextual responses without relying on external APIs.

Secure Password Management System

Dec 2025

Technologies: MERN Stack, JWT, bcrypt, OTP Authentication

- Developed a secure web-based password management system that allows users to safely store and manage credentials for multiple platforms using encrypted storage.
- Implemented JWT-based authentication, bcrypt password hashing, and OTP-based two-step verification to enhance user account security.
- Designed a user-friendly dashboard to add, update, delete, and organize saved passwords with secure backend APIs built using Node.js, Express.js, and MongoDB.

Technologies: Python, Machine Learning, SHAP

- Developed a machine learning model to predict Autism Spectrum Disorder (ASD) in toddlers using behavioral screening dataset features.
- Performed data preprocessing, feature engineering, and model training using algorithms such as Logistic Regression and Random Forest to improve prediction accuracy.
- Integrated SHAP (SHapley Additive Explanations) to interpret model predictions and identify the most influential features contributing to ASD risk.

Certifications

AWS Cloud Practitioner Essentials — AWS	Jan 2026
Full Stack Development with MERN — NASSCOM Foundation	Jan 2026
Introduction to Database Systems (Elite) — NPTEL	Apr 2025
Python Essentials 1 — Cisco Networking Academy	Mar 2025

Achievements

- Secured **State 2nd Rank** in Intermediate Public Examination (IPE).
- Secured **State Rank 23536** in TS EAMCET 2023.
